Animesh Basak

Lead Frontend Engineer | React, TypeScript, React Native | BFF | AI-native delivery
Delhi NCR, India | +91-9971340719 | animeshsbasak@gmail.com
linkedin.com/in/animeshbasak | github.com/animeshbasak | animeshbasak.com

PROFESSIONAL SUMMARY

Frontend lead with 8 years on high-traffic consumer products: hotels booking at MakeMyTrip (5M+ monthly sessions), merchant payments at Paytm (3M+ active merchants) and the Airtel Thanks app (150M+ MAU). Leads a squad of 5-7 engineers as HLD/LLD owner and final production review gate. Owns journeys end to end: React and TypeScript front ends on mobile web, desktop and React Native, and the **BFF layer** behind them, with Spring Boot services where needed. **Ships with AI**: MCP-integrated delivery workflows at work, and open-source AI developer tools (PAARTH, Trinetra) outside it.

SKILLS

Frontend: TypeScript, JavaScript, React, Next.js, React Native, Angular, Redux, Zustand, Server-Driven / Schema-Driven UI, Design Systems, Component Libraries, HTML5, CSS3
Architecture & Performance: HLD/LLD, Micro-frontends, Module Federation, Monorepos, SSR, Core Web Vitals, LCP, Critical Rendering Path, Bundle Optimization, Accessibility
BFF & Backend: BFF design and orchestration, REST API design, Java, Spring Boot, Node.js, Express, Python, SQL, PostgreSQL
AI: Claude Code, Cursor, Copilot, Codex, MCP servers, LLM applications (RAG, model routing, agentic workflows), agent hooks, local models with Ollama
Quality & Delivery: Vitest, Jest, React Testing Library, Sentry, GrowthBook (experimentation), Superset, Jenkins, GitHub Actions, Docker

WORK EXPERIENCE

Lead Engineer June 2025 - Present
Airtel Digital Ltd. | *New Delhi, India*

- Lead a squad of 5-7 engineers across prepaid, postpaid, Airtel One, Black and Self-KYC journeys on the Airtel Thanks app (150M+ MAU), on mobile web, desktop web and React Native; own HLD/LLD with architect sign-off and serve as the final production review gate for code quality and regression safety.
- Lead the Gen4 Self-KYC revamp across prepaid, postpaid and eSIM: a multi-page, schema-driven UI catalog and **one unified BFF family** covering cart, plans, number selection, porting, eSIM, Aadhaar and referee OTP, and order submission, replacing fragmented legacy flows. Phase 1 is live; Phase 2 fixes are verified in production.
- Designed the in-flight address-change orchestration (OTP-protected links, parallel order validation, feasibility checks, conditional update or cancel) so customers correct an address instead of cancelling the order.
- Shipped prepaid physical-SIM Self-KYC end to end, from acquisition to activation: OTP verification, resumable orders, cart and payment integration, post-payment KYC and SIM pairing.
- Shipped **Spring Boot REST services** for address update, order validation and cancellation, and BFF data mapping for a billing wallet; own GrowthBook experiments, Superset dashboards and Jenkins CI/CD, accountable for reducing P1 incidents.
- **AI-native delivery:** integrated MCP servers into Cursor (Figma designs, API contracts) with context packs for multi-repo work, and built my own AI coding agent for day-to-day Airtel work, adapted from PAARTH, for Cursor and Copilot: plan gates, org-policy checks and context that survives refreshes, across Spring and React codebases.

Senior Software Engineer II, Frontend July 2024 - May 2025
MakeMyTrip India Pvt. Ltd. | *Gurugram, India*

- Raised Lighthouse performance scores from 6 to 8-9 on the **hotels booking** PWA and desktop web (5M+ monthly sessions) through SSR tuning, LCP optimization and critical-rendering-path work, across a micro-frontend, Module Federation and monorepo architecture.
- Resolved a systemic defect generating 1,000+ Sentry errors within 48 hours; built a reusable component architecture that cut onboarding time 30% while sustaining 90%+ test coverage with Vitest, Jest and React Testing Library.

Software Engineer October 2021 - June 2024
One97 Communications Ltd. (Paytm) | *Noida, India*

- Led the migration of legacy merchant workflows to a modern React architecture for journeys serving 3M+ active merchants, using micro-frontends, Module Federation and monorepos; optimized the Soundbox checkout, contributing to a 40% increase in EDC device sales.
- As Analytics SPOC, built analytics dashboards that lifted merchant engagement metrics 10-15% and sped up cross-functional product decisions.

Frontend Developer, Sparklin Innovations (ICICI Bank) / Systems Engineer, Infosys (ANZ Bank) Dec 2018 - Oct 2021

- Built Angular and React modules for the ICICI and ANZ Bank internet-banking platforms, with API validation and test automation.

OPEN SOURCE (AI DEVELOPER TOOLS)

PAARTH | *Claude Code, MCP, Python* | github.com/animeshbasak/Paarth (v4.1.0, MIT)

- A routing layer for AI coding tools: picks the workflow and skills for each request, keeps memory between sessions, asks before risky commands, and can switch to a free local model.

Trinetra | *Swift, SwiftUI, agent hooks* | trinetra.animeshbasak.com (v0.1, MIT)

- A macOS menu bar app that keeps the Mac awake, lid closed included, exactly while Claude Code, Codex, Gemini CLI or Cursor agents work; live agent list, session summaries and a system monitor.

Also building: Lakshya Hub (Next.js, LLMs: résumé to tracked application, personal beta) and Glass (a Fire TV home screen with a Claude assistant, in daily use). Demos at animeshbasak.com.

EDUCATION

B.Tech, Computer Science and Engineering - Inderprastha Engineering College, Delhi NCR | 2014 - 2018
